CANOPY TENT SAFETY INFORMATION

Common Safety Risk

Canopy Tents are safe and effective when used correctly. Most safety concerns come from avoidable mistakes such as **improper anchoring, exposure to heat sources, or use in unsuitable weather conditions.**

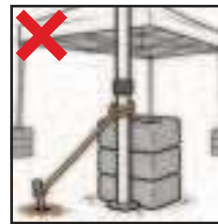

Anchoring Your Tent

Proper anchoring is the most effective way to prevent movement. Purpose-built anchoring solutions keep the canopy stable while minimizing trip hazards.

What to Avoid:

Cement blocks, water jugs, homemade concrete/PVC weights, random metal weights, or loose ropes crossing walkways. These can be unstable or create new hazards.

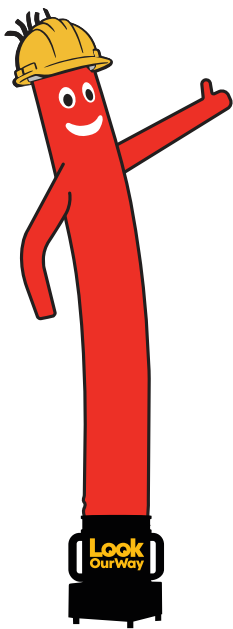

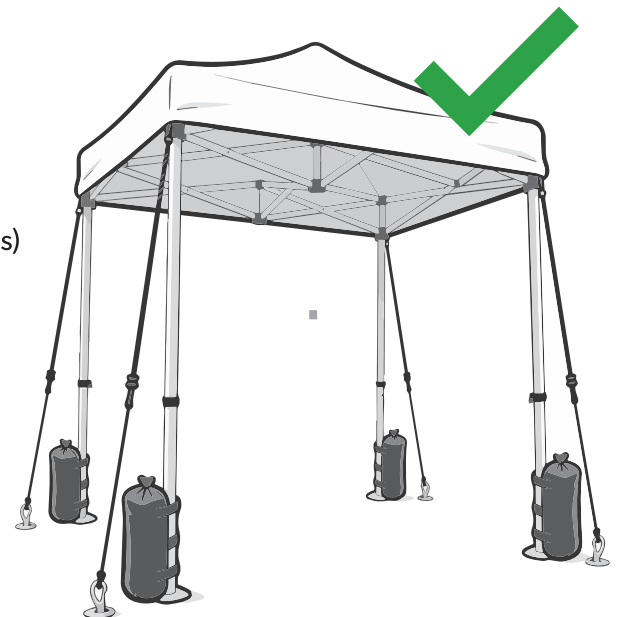

Safe & Secure:

Heavy-Duty Water Bags & Rope/Tie-Down sets provide a simple, effective solution for securing your tent.

- Lightweight
- Easy to Pack
- Each Water Bag holds 2.6 Gallons (21.6lbs)

CANOPY TENT SAFETY INFORMATION

Wind Safety

Because canopies are lightweight, wind can build pressure underneath the canopy top. Sudden gusts may lift or move the canopy if it is not properly secured.

***Avoid using canopies in winds over 15mph (unless properly Anchored & Weighted)**

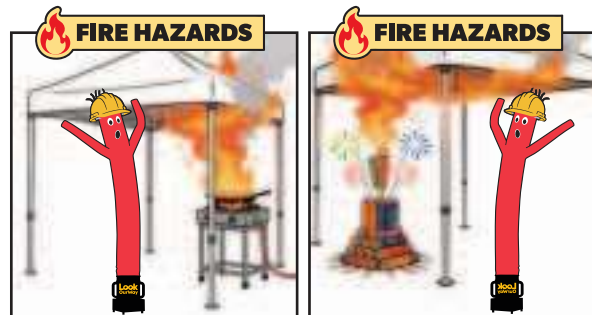

Weather & Wind Guidelines

LIGHT WIND	MODERATE WIND	STRONG WIND
Light Wind (0-15mph): Unweighted Tents OK	Moderate Wind (15-25mph): Weights Recommended	Strong Wind (25+mph): Weights & Ropes Recommended

Water Bags & Tie-Down Ropes are available at LookOurWay.com

Fire Hazards

Keep your Canopy Tent at least 5 meters (≈16 ft) from open flames, bonfires, barbecues, or other heat sources.

Fire Safety & Certifications

Event canopies should meet recognized fire safety standards. Look for **CPAI-84** or **NFPA** certification, which indicates flame-retardant materials designed to slow fire spread—non-certified canopies may fail inspection.

All Canopy Tent purchased through **LookOurWay.com** are both **CPAI-84 & NPAI-701** Certified Fire-Resistant.
