

5L (1.32G) Evaporative Humidifier (538.2 sq. ft. Coverage): Concise Use & Care Manual

1. Safety & Setup Place on a flat, dry surface (1ft+ from walls/electronics) to avoid water damage. Keep out of reach of kids/pets. Unpack and rinse the water tank, filter, and base with clean water before first use—dry gently.

2. Operation Fill Tank: Remove the tank, twist open the cap, fill with cool tap water (do not overfill), then reattach. Power On: Plug in, press the power button, and select humidity level (via control panel) based on needs (ideal: 40 – 60%). The unit runs automatically to maintain set humidity.

3. Maintenance Daily: Empty leftover water; refill with fresh water to prevent mold. Weekly: Remove and rinse the evaporative filter with water; replace the filter every 1 – 2 months (or if it 's discolored/clogged). Wipe the base with a damp cloth. Long-Term Storage: Drain all water, dry tank/base/filter completely, and store in a cool, dry place.

4. Troubleshooting No mist: Check if the tank is empty, filter is properly installed, or power cord is connected. Low humidity: Clean the filter; ensure the room size doesn ' t exceed 538.2 sq. ft. Odd smell: Replace the filter and clean the tank/base thoroughly. Do not use essential oils or hot water. For repairs, contact the manufacturer.
